

IT Risk Advisory Services

PCI-DSS SERVICES

Successfully obtaining and maintaining Payment Card Industry Data Security Standard (PCI DSS) compliance can sometimes be a monumental effort between a number of business processes across a variety of business units, encompassing both manual and automated procedures that involve an array of systems and personnel throughout the organization.

So Where Do You Begin?

As a certified Qualified Security Assessor (QSA), Schneider Downs is equipped to assist clients with their PCI compliance journey from the initial scoping and/or reduction of their cardholder data environment (CDE), gap/readiness assessments, and formal examinations resulting in a completed Self-Assessment Questionnaire (SAQ) or Report on Compliance (ROC) and accompanying Attestation of Compliance (AOC).

In addition, the Schneider Downs Cybersecurity team provides several services pertinent to PCI DSS compliance, including penetration testing and segmentation testing.

Our Approach to PCI Readiness

Based on published guidance and experience, the Schneider Downs team developed a five-phase approach to achieving an effective PCI compliance program with each phase following a clear, concise framework designed to deliver value to our clients.

Phase 1 – Awareness and Project Support

Develop the awareness of PCI compliance requirements and the related consequences of non-compliance at the senior management level.

Phase 2 – Inventory and Dataflow

Inventory and document the flow of credit card information throughout the organization's various processes, including data origination, data in motion, data at rest and data in use.

Phase 3 – Design and Scoping

Begin to formulate our strategic IT architecture and process design recommendations that will limit the areas of the network that fall within the scope of the PCI compliance effort.

Phase 4 – Reporting and Remediation Roadmap

Prepare an executive level report detailing the results of our analysis designed to provide a realistic understanding of the current state of your control environment and the risk associated with each of the identified weaknesses or gaps.

Phase 5 – Sustainment and Governance

Provide recommendations that would enhance your compliance governance structure and imbed controls in your ongoing processes that will address key security and control activities into operational processes, helping make PCI a core organizational competency.

Our approach can be tailored to meet the existing needs of, and current task being undertaken by, your organization

About Schneider Downs IT Risk Advisory

Schneider Downs' IT Risk Advisory professionals help organizations gain valuable insights into their processes and technologies. Our dedicated IT Risk Advisory professionals have experience working with a wide variety of industries and companies of all sizes. We will partner with you to provide comprehensive IT risk advisory reviews that will ensure your organization has effective and efficient technology controls that better align the technology function with their business and risk strategies.
